

EMCS-Cockpit for SAP®-Systems

Do you trade with goods subject to excise duty?

Are you looking for an SAP®-integrated system for future excise duty management?

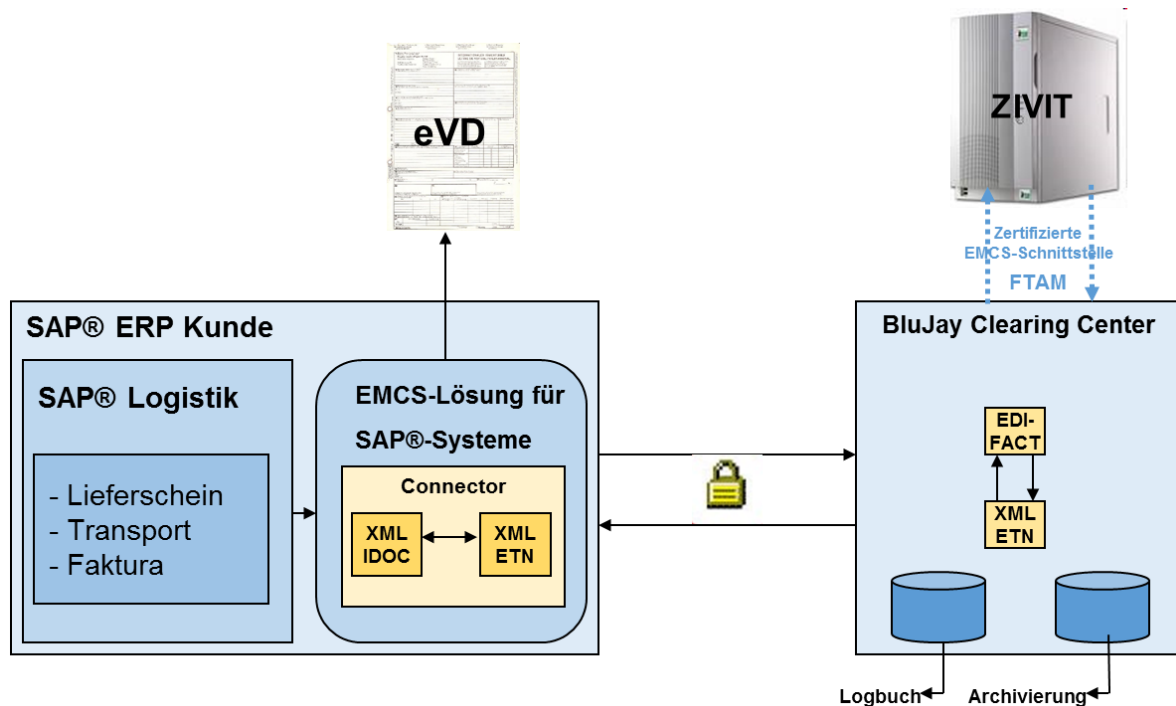

On April 1st, 2010, the Excise Movement and Control System (EMCS) was introduced under excise duty for the movement of excise goods. Since January 1st 2011, all intra-Community transport operations under tax suspension must be electronically opened in EMCS and also terminated in EMCS. National transit operations under German tax suspension are also affected here.

The EMCS Cockpit for SAP® systems offers you an attractive solution for fast and secure processing, as well as high transparency and control in the transport of excise goods.

Functionality

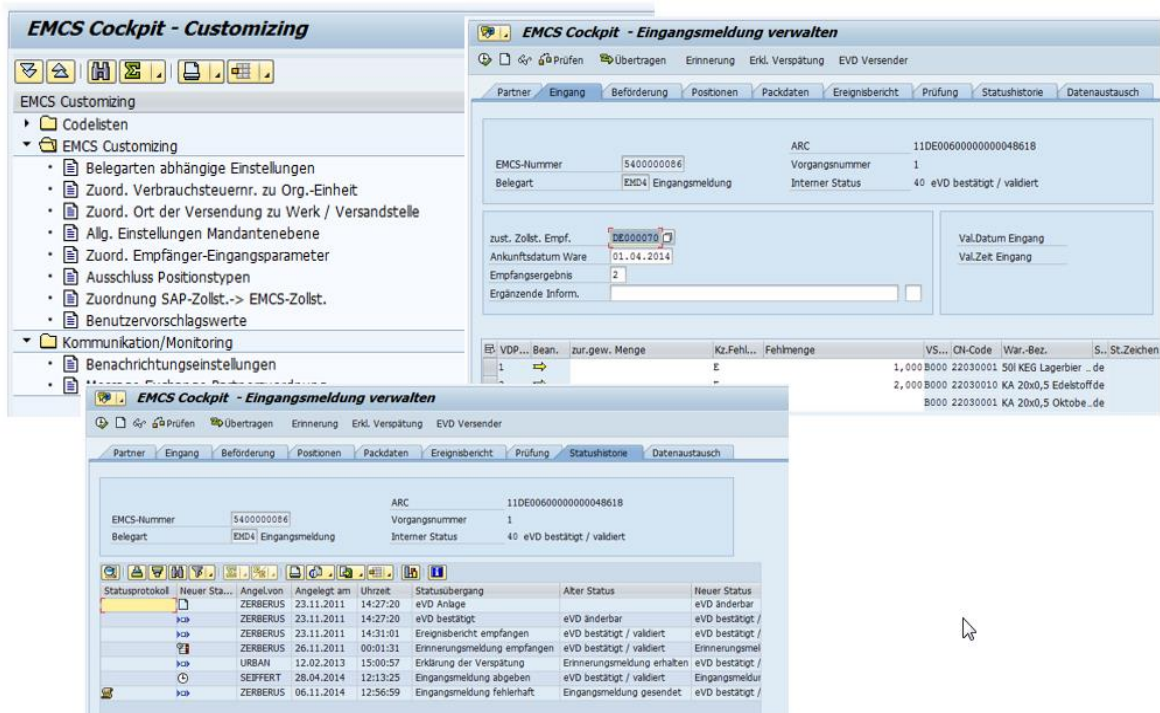

In the EMCS Cockpit for SAP® systems, you manage all process-relevant data in a form. Each process can be edited directly from within SAP®. Due to the full integration, all functions related to master data and transaction data in the SAP® environment can be used.

Our services

- Fully integrated EMCS processing and data exchange directly in your SAP® system
- Logging and documentation of incoming and outgoing EMCS messages directly in the SAP® system and storage of the electronic administrative documents (eADs) on a downstream archive system via the BusinessDocumentService or the ArchiveLink interface
- Comprehensive monitor functions in the EMCS cockpit provide information about the current status of the transport operations
- Linking the electronic administrative documents (eADs) to the relevant documents in the SCM process chain and your excise duty accounts
- Jump to the electronic administrative documents (eADs) via the "services related to the object" in delivery, billing and transport
- Secure and fast data exchange between the EMCS cockpit for SAP® systems and certified customs data clearing from BluJay Solutions
- Flexible use of the application through individual Customizing and Business Add-Ins possible
- Practice-oriented advice

The following examples from the fully integrated EMCS solution for SAP® systems show the simple, flexible and user-friendly handling in the customizing area as well as the exemplary administration and status update of an inbound message:

Your benefit

- Relieving employees by integrating EMCS processing in the leading EDP system of your company
- Increase of efficiency in the management and control of excise duty
Fast process management enables rapid release of the security deposit
- Complete documentation of excise tax transactions and direct access to the electronic administrative documents (eADs) in the SAP® system
- Faster and complete review of all relevant business processes by your audit institutions
- User-friendly system through familiar working environment
- ATLAS MX Monitoring allows the department to quickly and easily find faulty- or messages which have not been transmitted using a clear list with the help of the traffic light function
- With ATLAS MX, the department does not depend on responsible supervisors of the communication platform, but can independently look into the process

What else distinguishes us ...

Due to our many years of experience in the area of foreign trade law, the safe handling of sensitive data is a matter of course for us. With us you rely on a practice-oriented implementation in your company!
